

BEFORE YOU ACTIVATE YOUR ALARM SYSTEM

1. Securely lock all exterior doors including deadbolts and other secondary locking devices. Your locks are your first line of defense, not your alarm system.
2. All windows must be closed and locked to ensure that all contacts are properly aligned.
3. Make sure that items or decorations around doors and windows do not interfere with door or window contacts or the motion sensors.
4. Secure any interior/exterior garage entry doors with a deadbolt device. Be sure to close your overhead door when exiting the garage.
5. Keep pets, helium-filled balloons, fans, heaters, plants, curtains, and decorations etc., away from motion sensor areas.
6. Activate your alarm system and make your exit in the time allowed when you have finished preparing your home or business prior to alarm activation. If you don't know your delay time, contact your alarm company. It should be at least 45 seconds, or longer, if needed.
7. Wait a few minutes before driving off to make sure your alarm system does not cause a false activation.
8. If your alarm system should activate, **don't panic!** Re-enter your home or business, then enter your code to deactivate your alarm. Carefully follow the instructions given by your alarm company to cancel and prevent a false alarm. Keep your monitoring company phone number as a contact in your phone.
9. Make sure your emergency contact list is current and accurate.

Proper Preparation Can Avoid Costly FALSE ALARM FINES!
